

Woven Applications

Woven Fabric: A fabric composed of two sets of yarns, warp and filling, and formed by weaving, which is the interlacing of these sets of yarns to form a fabric. There are many weave patterns but three of the most common constructions include the plain, twill, and satin weaves.

The threads below are the most common thread types and sizes used by manufacturers around the world.

- **#1 Selection** should be used where there are special requirements, such as a) minimizing thread breakage and re-stitched seams; b) for sewing special fabrics that are susceptible to excessive seam puckering; and c) where quality seaming is a must.
- **#2 Selection** should be used where sewing requirements are not as difficult and cost is the major consideration.

The recommendations listed below include the most common thread type & size used for a particular sewn product. In many cases, other thread types are sometimes used for buttonsewing, buttonholing, blindstitching, and other special requirements like overdyeing, etc.

Apparel - Wovens

Garment	Fabric Wt.	#1 Thread Selection Where <u>SEAM QUALITY</u> Is Critical	#2 Thread Selection Where <u>PRICE POINT</u> Is the Major Consideration
Blouse	X-Lt	T-18 Perma Core®	T-21 Spun Poly**
Blouse	Lt-Med	T-24 Perma Core®	T-27 or T-30 Spun Poly**

General Guide to Thread Tex Size by Fabric Weight

TEX SIZE: is the gram weight of 1000M of greige yarn. The larger the Tex Size, the heavier the Thread Size.

Thread Tex Size	Oz./Sq. Yd.	Seam Construction Weight
Tex 16, 18, 21	2-4 Oz.	Extra Light
Tex 24, 27, 30	4-6 Oz.	Light
Tex 30, 35, 40, 50	6-8 Oz.	Medium
Tex 50, 60, 70	8-10 Oz.	Medium Heavy
Tex 60, 80, 90, 105, 120	10-14 Oz.	Heavy
