## Press Release

### Howar Equipment Inc. offers a full Range of Pay-off and Tension Control equipment

When looking at their capital equipment purchases most customer focus the main piece of machinery in the line, may it be the drawing machine, the extruder and its controls, the buncher/strander etc.

One needs to consider, however, that even the best machine will perform poorly and at low efficiency if the down stream equipment, namely the pay-off and its related tension control system is not of at least equivalent quality and performance.

Howar Equipment Inc. has specialized in the provision of top quality pay-off and tension control systems offering a full range of this type of equipment.

Starting from basket type pay-off utilized to feed multi-wire drawing machines, dancer/accumulator systems which protect the line from the ill effects of wire breaks, tension equalizers allowing the operator to accurately control tension in a very efficient and consistent manner, pre-twisters for the production of difficult cables on double twisters, flyer pay-offs for all types of applications behind bunchers, rewinders and spoolers to shaft and pintle type pay-off systems.

Basket Pay-Off

Tension Equalizer

Pre-Twister

Flyer Pay-Off Range

Pintle Type Pay-off
